

WEAVING WORDS

A Quick Tip on Synthesizing Literature

Synthesizing Literature: Combining ideas and insights from many texts by analyzing and interpreting content from several sources to create a broader and more cohesive understanding of a topic.

Synthesizing is not just writing about what one author said as compared to another.

~~Well, I guess Charlotte says spider control insects, Adam says they get eaten, and James says they help with pollination.~~

Charlotte says spiders help control insect populations!

And Adam says spiders are a great food source for many predators.

James says spiders help with pollination.

Synthesizing literature is summarizing what **EVERYONE** is agreeing with on the topic.

Charlotte says spiders help control insect populations!

Adams agrees that spiders help regulate insect populations and also small vertebrates!

 The experts agree that spiders regulate many populations, both insect and animal. That's fantastic!

James says spiders can be very beneficial in keeping insect populations in check by reducing disease-carrying bugs like mosquitoes!
